

SKYNET™ FIRE ALARM MONITORING SYSTEM

WIRELESS MONITORING SOLUTIONS

WHAT IS SKYNET?

Skynet is a unique fire alarm monitoring system that uses a fully listed and approved fire mesh system to provide off site monitoring of your fire alarm system.

A wireless mesh network provides multiple paths for data transfer creating redundancy and therefore 100% reliability. Our network uses only U.L. 864 Fire listed AES-IntelliNet technology incorporating 2-way smart transceivers for communicating data between remote locations and the U.L. Listed Central Receiver.

BENEFITS

- 100% reliability
- Eliminates costly phone lines
- No cost installation options
- Monthly savings on monitoring fees
- UL listed and approved
- Fire only network
